

NEXT GENERATION WILDFIRE PROTECTION

FIRE RESISTANT STRUCTURE WRAP

Comes with a 100% Guarantee!

Wrapping Structures Just Got Faster & Easier

USED BY US FOREST SERVICE TO PROTECT HISTORICAL BUILDINGS & NATIONAL TREASURES

FIELD & WILDFIRE TESTED BY US FOREST SERVICE

Key Part of Community Fire Plans and Grant Programs
Can Be Deployed Where & When the County Needs Them

Reflects 95% of Radiant Heat & Protects from Firebrands
Covers large Glass Windows & Doors, Seals Attic Vents

Cover a 3,000 SqFt Home in Less Than 90 Minutes
Can be left up for days or weeks as needed

Superior Protection to Gels and Retardants
Won't Evaporate, Wash Off, Stain, & They Are Reusable

Higher Wind Resistance, Easy Anchoring, No Damage to Home
New Anchoring System for Fast Up and Down with No Damage

Firezat Fire Shields Protect

**Homes
Cabins
Historical Sites
Businesses
Industrial**

**Shake Roofs
Inventories
Luxury Homes
Fences
Equipment**

Environmentally Friendly

If you're reading this you have either been threatened by a wildfire or expect that you will. Global Warming and climate change is lengthening the fire season, raising temperatures, and drying out the fuel surrounding your home. Firefighters can't be everywhere during a major fire event which means you must do what you can to help them protect your home.

Clearing a defensible space around your home is an important first step. When you are given the order to evacuate, you want to know you've done everything you can to protect your home. Now for the first time you can apply common sense for the ultimate protection from Firebrands, radiant heat, and even limited direct fire contact. Quickly wrap your home in a fire resistant Aluminum shield... the same used by the forest service to protect valuable historical structures for years.

Firezat Fire Shields require no power, water, or special equipment to use or deploy. They are environmentally friendly and once deployed will continue to protect your property for days or weeks until removed and stored for future use. Unlike Foams and Gels which evaporate when faced with the high heat, extreme low humidity, and high winds that accompany wildfires, Fire Shields are not affected. This Fire Shield material is used to protect national treasures and historical monuments in the path of wildfires, why not your home?

Firezat Fire Shields are sewn with fire resistant Kevlar® thread for superior quality and protection. They are easy to handle, deploy quickly, and work best for large areas such as homes, cabins, resorts, outbuildings, vehicles, and equipment. A 15' X 50' Shield covers 750 SqFt and stores in a roll only 8" X 8" X 60". Firezat Fire Shields can be reused and stored for extended periods of time and do not support mold or mildew or react to acids or alkalis.

These Fire Shields Protect Your Structure in 4 Different Ways.

First, they reflect up to 95% of the radiant heat of the fire away from your home which prevents it from preheating. With windows and doors covered radiant heat can't pass through and ignite curtains, carpets, or furniture allowing the home to burn from the inside out.

Second, they provide a fire resistant, slick surface that eliminates sharp angles on your roof that can catch and trap embers. This allows embers to slide off or extinguish themselves without ignition. Fire Shields also cover attic vents preventing embers from entering your attic, a major cause of wildfire damage.

Fire Embers

Convection

Radiant heat

Third, fire shields provide a fire resistant layer between your home, radiant heat, firebrands, and burning debris that will be blown against your home during the fire. An effective fire barrier that can make the difference between total destruction and no damage.

And finally, in the worst case scenarios anchored Fire Shields will deny the fire oxygen that it needs to burn. In some cases after long extended exposure to intense flame some smoldering may occur under the shields. Firefighters can easily extinguish this when they come back after the fire has burned through.
